Hazardous Weather

Hazardous Weather

Day 2-3 Weather Hazards

Valid: 0800 Wed - 0800 Fri

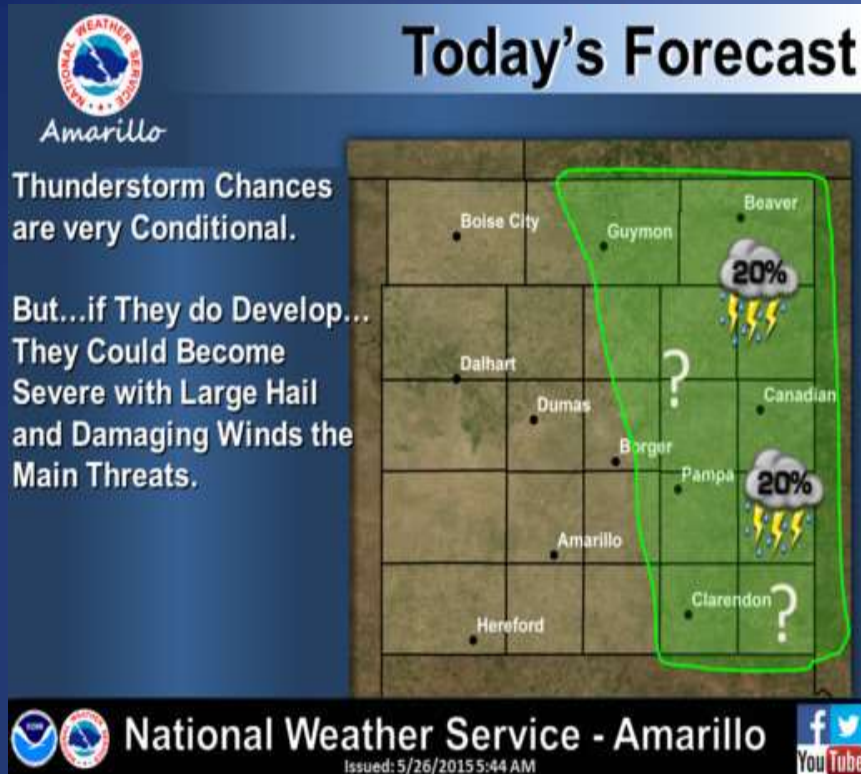

Hazardous Weather

Most areas will see dry and sunny conditions. However, across the Rolling Plains, some severe storms may be possible. The atmosphere will be very unstable though the near-surface forcing is fairly weak. Thus, if any storms manage to become established, they will quickly become severe. Of course, then again, it might just stay sunny all day too with storms to our southeast.

Hazardous Weather

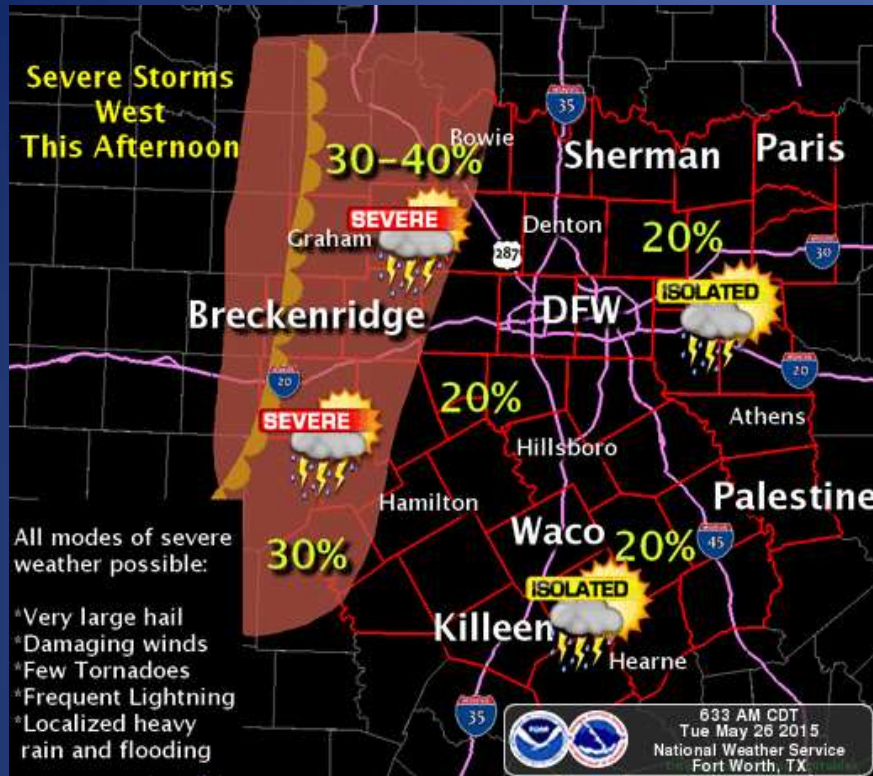

There are big questions on whether thunderstorms will develop or not. If they do develop, then they will be in the eastern panhandles and they may become severe.

A Slight Risk of severe storms continues this afternoon and evening.

Hazardous Weather

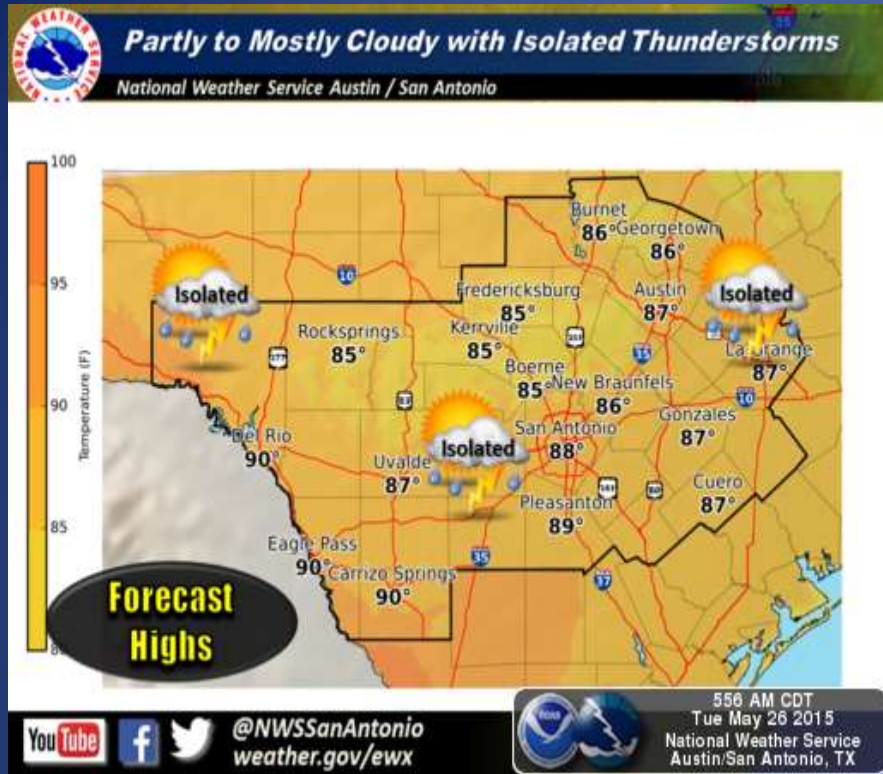

A surface dryline will approach western north Texas this afternoon along with another upper level disturbance. Though coverage of storms will not be as high, isolated to scattered severe storms will develop on the dryline this afternoon and move east. All modes of severe weather are possible in the hatched areas including very large hail, damaging winds, tornadoes, and very localized areas of heavy rainfall and flooding. Stay tuned to the latest forecast for your area regarding this afternoon's severe weather risk.
